Catastrophic Recovery

SUPOR is recognized as experts in catastrophic recovery by major airlines, airport authorities, aircraft manufacturers (domestic and abroad), and rail companies. We operate safely and in a timely manner to help restore normalcy.

During a recovery operation, we understand the significance and value of the equipment being salvaged, and we pay special attention when handling the varied components. We pride ourselves on our ability to act and perform in a very professional and safe manner.

Miracle on the Hudson

SUPOR Heavy Haul lead the recovery project that lifted the damaged plane from the Hudson River in New York City.

Crane Services

For 60 years, the **SUPOR** Team have been expert specialists in transporting goods and materials across North America. And since that time, we've also taken things higher — serving the needs of the building trades with one of the region's finest fleets of high-capacity cranes.

Our full-service line of gear is manufactured by Liebherr, the recognized global market leader for tower cranes, all-terrain mobile cranes, telescopic truck-mounted cranes, boom cranes, "crawlers," and other heavy-duty hoisting equipment, with lift capacities from 15 to 600 tons.

Rigging

From the public utility companies serving the largest population centers, to the engineering firms handling major construction and public works projects, the people who keep our communities connected and economic engines running know to call **SUPOR** when a critical project requires experience and professionalism to complete.

With one of the most comprehensive collections of specialized gear available in the United States — including gantry lift systems and hydraulic jacks capable of handling "**SUPOR** -Sized" loads of up to 1,000 tons — we offer one-stop access to equipment that meets the industry's most rigorous standards for safety and top-of-the-line performance.

Specialized Jobs

SUPOR Crane & Rigging's turnkey services have long been recognized as the model for commercial, industrial, and public utility sectors. Our rigging warehouses have some of the most complete collections of equipment in the United States. Our rigging gear and technical knowledge are complemented by our fleet of hydraulic cranes, gantries, and slide systems.

Along with our most advanced equipment comes our world-class 24/7 technical support. Our in-house software allows us to choose the right tool for the job. Our clients appreciate the detail in our submittals, which we achieve through our proficient planning team and state-of-the-art software such as LICCON Work Planner to analyze crane lifts.

Collection of Equipment

SUPOR Crane & Rigging's fleet of cranes ranges in capacity from 15 to 600 tons. Our equipment complies with the most rigorous safety standards and can satisfy most industry needs.

- **Liebherr LTM-1500:** The LTM 1500-8.1 is suitable for universal use with an extensive range of boom systems. Its load capacities can be increased even further with its Y boom guying.
- **Liebherr LTM-1400:** The seven-axle LTM 1400-7.1 mobile crane is one of the most compact representatives of its class and extraordinarily maneuverable, thanks to its active rear-axle steering. The ballast radius can be significantly reduced for use in constricted areas by moving the counterweight.
- **Liebherr LTM-1250:** The LTM 1250-5.1 features enormous load capacities. VarioBallast allows the crane to deliver maximum load capacities with a large ballast radius, making it perfect for constricted sites with confined space. The crane can be fitted with a multi-functional folding jib or a long fixed jib.
- **Liebherr LTM-1100:** The LTM 1100-5.2 delivers maximum load capacities with a long telescopic boom that can be extended with additional lattice mast sections and a double-folding jib.
- **Liebherr LTM-1070-4.2**
- **Liebherr LTM-1055-3.2**
- **Liebherr LTC-1050-3.1**
- **Magni RTH6.24S**
